

Intella 1.5.2 Release Notes

Highlights

- Introducing a new product: **Intella Professional**.
- Support for **Summation** and **Concordance** load files.
- **Analyst's Notebook** and **iBase** exporting can now be used with all Intella license types.

General

- This version introduces a new product type: Intella Professional. This product has no hardcoded limit on the allowed maximum case size.

Indexing

- Resolved issues with indexing folders in NSF files whose names contain unusual characters.

Searching

- Made MD5 list search work with more plain text file encodings. This fix results in MD5 lists that are exported by EnCase to work without modifications to the file encoding. To benefit from this improvement, currently added MD5 lists need to be re-added to the case.
- Resolved a Cluster Map selection issue that was triggered by combining right-clicks with the Ctrl and Shift keys.

Exporting

- Added support for exporting items as a Load File. This export is currently in the beta phase and may therefore change in future versions. Initially supported are Summation and Concordance.
- Intella 1.5.2 makes the export to i2's Analyst's Notebook and iBase available to all license types. Introduced in Intella 1.5.1, this functionality was originally only available to users of Intella TEAM Manager.
- Automatic numbering of exported files is now available in all product types.
- Minor improvements to logging, export reports and indexing of large XLSX files.

TEAM

- Resolved an issue with work reports that failed to properly filter reviewer annotations by source.

Upgrade Notes

- As part of its standard procedures, Intella will detect the version upgrade when you open a case made with 1.5 or 1.5.1 and suggest that you reindex the case.
 - Reindexing of a case made with 1.5.1 is only necessary for cases containing XLSX files that could not be indexed. When this is not the case, reindexing can safely be skipped.
 - Cases made with 1.5 will open with 1.5.2, but sorting of the Senders and Receivers columns may not work correctly until the case has been reindexed.
- Cases that were made with versions older than 1.5 cannot be opened.
