Dongle activation

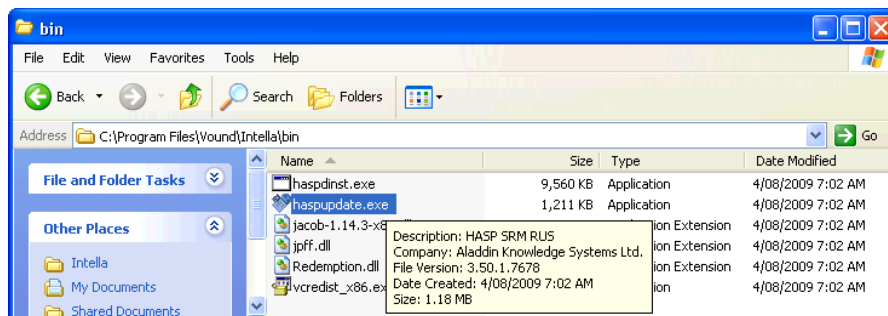

Overall process

Activating your dongle is necessary in order to work with Intella. The dongle you received is probably not activated. It requires a two step process.

- I. First you need to send dongle and license information to your Vound representative.
- II. Second you need to apply the license update file that will be sent to you.

Step 1. Sending dongle information

1. Plug in your dongle
2. From the C:\Program Files\Vound\Intella\bin directory open haspupdate.exe

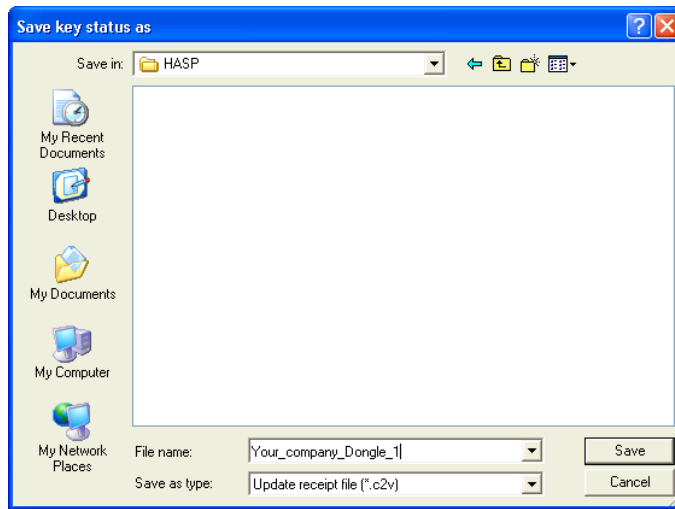

3. Once the haspupdate.exe is open select the “Collect Information” button.

4. When you click the “Collect information” button you will be asked to *Save key status as*. Please save the file with your company name. If you are activating more than one dongle please number the files. The file (s) you create will have a c2v file extension.

Example:

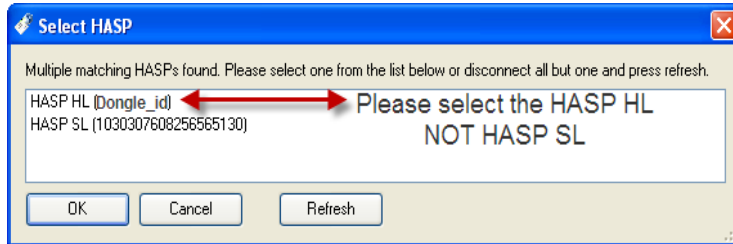

ACME_Forensics_1.c2v

ACME_Forensics_2.c2v

5. When you select Save, you will see the Select HASP dialog. Please select the **HASP HL** not the HASP SL.

6. Write down the dongle ID labeling each dongle. This will help when applying the update.

7. Please send your Vound representative the c2v files you created.

Please ensure you include the following details in the email when sending the c2v files:

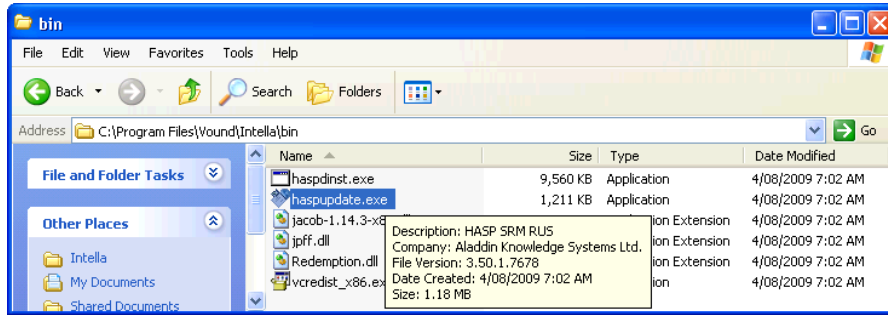

- Organization Name: _____
- Address: _____
- Zip code: _____
- Country: _____
- Contact Name: _____
- Phone Number: _____
- Email Address: _____

Step 2. Applying the update file

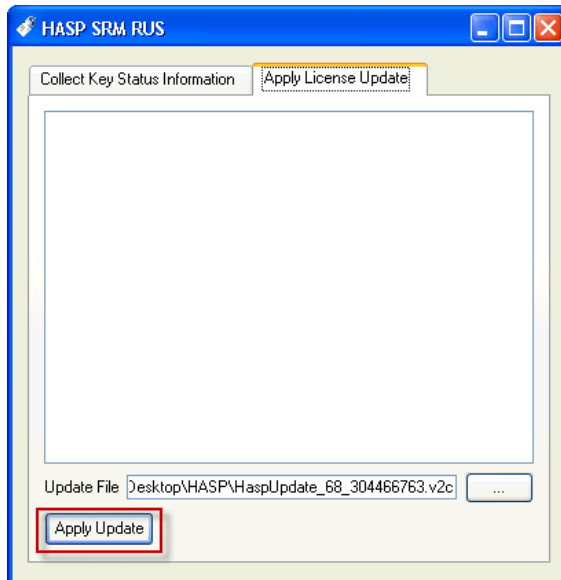

8. Your Vound representative will send you back the dongle activation codes in a file. The activation codes are dongle specific. The file sent to you will end with a .v2c file extension and the name of the file contains the dongle ID.

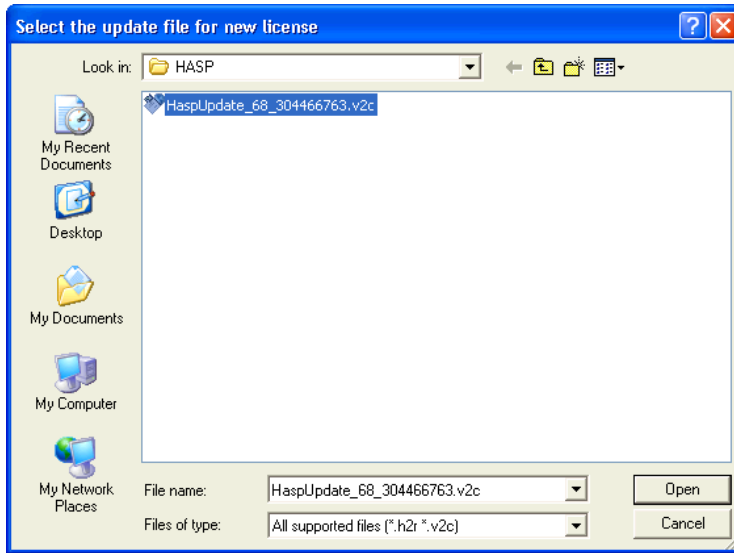

Example: HaspUpdate_68_304466763.v2c (the dongle ID in this case is: 304466763)

9. From the C:\Program Files\Vound\Intella\bin directory open the haspupdate.exe

10. Choose the "Apply License Update" tab. Then select the browse button beside "Update File" box. Browse and select the v2c file sent to you.

11. Once you have selected the v2c file select “Apply update” button. This will activate the dongle.
