# 1.0.5 Release Notes

Released: December 23, 2019

## Highlights

- Various indexing and exporting stability improvements.

## Indexing

- Added type detection for HEIF/HEIC image files.
- Added metadata extraction for HEIF image files.
- Added detection of AMR audio files. These are often used to record voicemails.
- Added support for indexing NSF files with IBM Notes 10.
- Improved indexing of MS Exchange databases.
- Improved indexing of BitLocker and APFS disk images.
- Improved memory usage when processing archives.
- Resolved an issue with the timestamps in EXIF metadata being interpreted incorrectly.
- Resolved an issue with SMS messages in Oxygen XML reports not being decoded properly.

## Results

- Added "Created" column to USB activity category to show Windows Event Log timestamps.

## Previewer

- Improved rendering of MS Office documents in previewer.

## Exporting

- Resolved an issue with the inconsistent use of bold fonts in the Table of Contents in reports.
- Resolved an issue with certain images failing to export to a report.
- Improved the rendering style of hyperlinks in the reports.

## Installer

- Added dongle manager link to Start menu.
