

Intella®

The future of Forensic Search technology

Press Release

Vound cuts time and money organizations spend on forensic search with new release of Intella® and Intella® Connect

Colorado, USA, 11 APRIL 2014 – Leading global vendor of forensic search technologies, Vound, has released a new version of the flagship Intella® range of eDiscovery and digital investigation software. The new releases contain a raft of new features designed to even further reduce the amount of time and money Intella® customers spend on e-discovery, investigations and audits.

By continually enhancing the existing functionality of Intella® software and incorporating new features to further improve productivity for their customers, Vound aims to help users keep precious resourcing requirements to a minimum and make an informed decision on their cases more quickly.

Peter Mercer, Chief Technology Officer of Vound, says “Our Intella® development team designs from the customers’ standpoint so we are focused on increasing user efficiency and delivering a higher return on their investment. The purpose of every feature in our software is primarily to make the customer’s job easier, and the new release of Intella® continues to meet that standard.”

Highlights of the newly released Intella® v.1.7.3. and Intella® Connect v.1.7.3. include:

- Support for **redaction of items**, where reviewers can mark legally privileged or sensitive information within an item’s text, metadata or graphical content to black it out when exported to PDF or load file. (Intella® and Intella® Connect).
- Export sets allowing for better export management by letting the reviewer reuse export settings and continue item numbering from previous exports. (Intella®).
- A new **authorization engine** enabling the creation of flexible authorization rules based on user roles and permissions. (Intella® Connect).
- A fully featured **export wizard** allowing for the creation of highly customizable export packages directly from the web browser. (Intella® Connect).

Intella®

The future of Forensic Search technology

Press Release

Intella® is a powerful forensic search tool that enables staff to quickly analyze email and cell phone data, attachments, embedded images, archives, headers and metadata. With Intella®'s unique 'cluster map', relationships and timelines are instantly visualized enabling users to quickly narrow the data set down to only pertinent items.

"Communication is an ever changing environment so the volume of data involved in a forensic search is continuing to grow at a massive rate," comments Peter Mercer.

"Our approach to forensic search and e-discovery dramatically reduces the time, expense and personnel needed for each case by enabling users to get right to the critical data early on in the process.

Investigations not only need to be thorough but they should also be efficient, and the software you use is a major part of the solution. We've designed Intella® with the customer in mind, to produce quality results regardless of the users' skill level," Mercer concludes.

The Intella® product range offers a forensic search solution for a wide range of user requirements, from single users through to multiple reviewers who need to work independently and simultaneously. The premium product, Intella® Connect, enables multiple reviewers to collectively search electronically stored information (ESI) using a web browser over HTTP or HTTPS and does away with the need to install software on each local machine. As Intella® is not charged on a per gigabit basis customers know up front the total cost of the solution without any surprises further down the track.

To see Intella®'s powerful, easy-to-use forensic search capabilities in action, please view one of our short videos <https://www.vound-software.com/videos> or email info@vound-software.com to request an online live demonstration.

About Vound

Vound is a leading global vendor of technology used for forensic search, eDiscovery and information governance. Our Intella® range of eDiscovery and digital investigation software is used by the world's best-known enterprises, banks, law enforcement and government agencies for Human Resources, Legal and Compliance matters. Intella®'s strength lies in taking large collections of data and allowing users to quickly search and drill down to the most pertinent evidence; minimising the need for experts and significantly cutting the time and costs organisations normally take to carry out investigations, audit requests and eDiscovery.
