

Product Family

Intella®: Smarter eDiscovery and Forensic Investigations
 Innovative, powerful, and simple – exactly the tools you need to conquer today's data challenges and deliver world class results.

Process. Search. Filter. Produce. Simple.

Speed

Market-leading indexing speeds and easy-to-use platform boost productivity.

Accuracy

eDiscovery and forensic search capabilities that enable faster, higher quality results.

Value

The industry's best value and pricing. Bar none.

Intella® and Intella® Connect Highlights

Intella

- Intuitive UIs
- Customized reporting across a broad array of outputs
- Efficient document batching & coding
- Load Files support
- Cloud source detection: Dropbox, Office 365 (incl. OneDrive), SharePoint, Gmail
- Identities ties together online aliases
- Email threading provides visualization of replies/ forwards, discerns unique content
- Integrated OCR of unlimited documents
- Geolocation & Histogram results
- Indexing of virtual machine images (VMDK and VHD formats)
- Regular expression-based detection of text patterns, e.g. bank account numbers
- Skin tone analysis of images
- Redaction
- Detection of Bitcoin cryptocurrency files.

Intella Connect and Connect Plus

- Allows multiple reviewers to simultaneously work on a matter
- Single point of access allows reviewers to connect regardless of Connect host server
- Search Electronically Stored Information (ESI) using only a web browser
- Simplify both setup and review of multi-user cases
- Deliver improved productivity via a workflow that enables a broader range of professionals to undertake document review
- Simplifies the administration of both setup and review multi-user cases
- Works with browsers on both Windows and Apple operating systems.

Innovative, powerful, and simple – exactly the tools you need to conquer today's data challenges and deliver world class results.

More caseloads

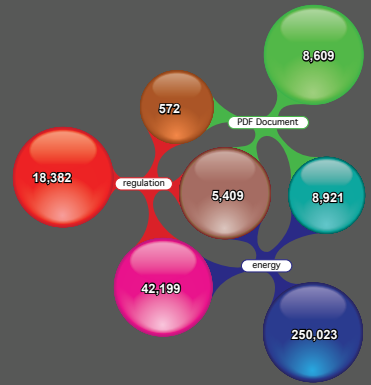

More complexity

Less time

Intella's ediscovery and forensic search capabilities enable you to deliver faster, higher quality results.

Our clients love our cluster map technology which builds a visualization of keyword relationships.

Intella® Connect and Connect Plus allows reviewers to independently search, filter, bookmark, tag, redact and comment simultaneously via a web browser. Intella® Connect streamlines the process of document review and investigation by allowing multiple reviewers to simultaneously work on the same case without software installation or complex network and system configurations.

Intella® TEAM enables multiple individuals to review evidence independently and simultaneously, with one case administrator. It is ideal for any agency, law firm or investigation team who need to process, search and analyze Electronically Stored Information (ESI) evidence for multiple users.

Intella® PRO is for single users who need to process, search and analyze Electronically Stored Information (ESI) evidence in excess of 250GB. Intella® Pro was designed for corporate investigators, professional service firms and consultants who have a need to review larger amounts of ESI.

Intella® 250, 100 & 10 offer the same features. The only difference that defines each one is the amount of Electronically Stored Information (ESI) you can process, search and analyze. Intella® 250 allows you to search up to 250GB, Intella® 100 up to 100GB and Intella® 10 up to 10GB. These products are the ideal email investigation and eDiscovery software for single users.

Intella® Viewer performs the same search and analysis functions as Intella® Pro, 250 and 100 except it does not process and create new cases. Thus the Viewer enables additional investigators to view existing cases on a different computer. (Limit of 2 Viewers with Intella® 100, 3 Viewers with Intella® 250 and 8 Viewers with Intella® Pro.)

Intella® Academic is for evidence sizes of 10GB or less. No support is provided. Minimum order is 5 licenses and lost dongles are replaced at full price.

What our clients say

"Intella uniquely allows search results of large data sets through various search facets, translation and visualization tools such as cluster maps and social graphs designed to link emails to files related to queries, capabilities above and beyond similar software tools. Intella has been an extremely effective forensic tool for our organization."

**U.S. Air Force,
Air Force Material Command office**

"The powerful and flexible combination of Intella Pro and Intella Connect allows us to manage the vast majority of our e-discovery workload in-house, from processing through production, while maintaining control of both costs and quality for our clients."

**Jason C., Litigation Support,
AmLaw 200 law firm**

Intella's® range of eDiscovery and digital investigation software is used by over 1500 organisations worldwide including the Big 4, Fortune 500 enterprises and Big Box Retailers, national security agencies, global banks, law firms, and law enforcement for Human Resources, Legal and Compliance matters.
