Intella®

Process | Search | Filter | Produce. Simple.

Intella® products from Vound enable you to easily investigate computer misuse.

Professional service providers and large corporations are involved in an increasing number of digital investigations involving email, cellphones and other electronic data. Investigations can involve claims of fraud, improper use of assets, data theft, compliance, human resource violations and/or criminal activity.

Many providers around the world are now using Intella® products and training from Vound to undertake these types of electronic investigations.

With Intella®, you can quickly search large volumes of email, cellphone and other data using a number of innovative approaches. An example of these approaches is to search by keyword, sender or recipient and view email threads using our unique visual format known as a 'cluster map'. Intella® will enable you to find the information you need faster than any other tool.

Intella® is popular among both eDiscovery consultants and computer forensic examiners. Its' widespread use in both areas is a testament.

Bruce Olson, *Technolawyer USA*

Customer service and ease of use is everything to us...

At Vound we are committed to listening to our customers' requirements and delivering great service. Our easy to use software solutions are backed by our deep understanding of computer assisted searches. Our software is designed to produce quality results, regardless of the person's skill level.

Peter Mercer, *CEO Vound Software*
